RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 78 pages. Original publisher: Hampton, Va. : National Aeronautics and Space Administration, Langley Research Center ; Springfield, Va. : National Technical Information Service, distributor, 1994 OCLC Number: (OCoLC)60677341 Excerpt: . . . As part of the study, multiple tunnel runs were Angle of attack. The model angle of attack necessary with and without the flow-angle probe in is set manually by rotating the turntables to the de-place because of probe interference in the measured side pitch. This angle is determined from inclinometer readings on a reference surface attached to the wall and slot pressure data. To determine the model turntable. During the experiment, data were repeatability of the test condition, the standard deviation of the tunnel Mach number was determined acquired at 0, 0.5, 1, and 2 on all wall configurations. Data were acquired at 4 on some configurations from the same consecutive repeat runs used for the configurations. The angles were generally set to within probe analysis. The standard deviation of the free-stream Mach number was typically less than 0.0017; for free-stream Mach numbers around 0.7, the standard deviation of the free-stream Mach number is about 0.0010. Both repeatability values are considered. General observations. Typical wall-pressure readings good for transonic wind tunnels. data from the 619 tunnel experiment are shown in figure 28. The tunnel-empty (fig. 28 (a)) and Mach number calibrations. Typical tunnel-airfoil-installed (...

Reviews

The publication is fantastic and great. It really is basic but shocks from the 50 percent from the ebook. Its been written in an remarkably easy way in fact it is only soon after i finished reading this ebook in which really changed me, alter the way in my opinion.

-- **Jayme Kuhlman**

Very helpful for all type of individuals. It is amongst the most incredible ebook i have got study. I am just very easily could get a satisfaction of reading a composed publication.
